**Description of the Main Feature**

The main feature of the E-Bike Rental System is the **Bike Rental Booking System**. It allows users to browse available bikes, view detailed bike information, and book bikes for specific date ranges. Users can track their rental history and booking status, while admins can manage the full bike inventory, bookings, and user accounts through a dedicated Admin Panel.

Inputs and Validations Used

**Registration / Login:**

Email – must be valid email format

Password – minimum 8 characters; must include uppercase, lowercase, number, and special character

Username – minimum 3 characters, alphanumeric only

**Bike Booking:**

Start Date – cannot be in the past

End Date – must be after the start date

Bike Selection – bike must be available for the selected dates

User Authentication – must be logged in to book

**Admin (Bike Management):**

All bike detail fields must be filled

Price must be a positive number

Location must be a valid option from the system

How the Feature Works

User registers or logs in (email/password or Google OAuth)

User browses available bikes on the Bike List page

User clicks a bike to view its full details

User clicks "Book Now" to go to the Booking page

System validates date availability and bike status

User selects rental dates; system calculates total price automatically

User confirms the booking; system processes a simulated payment

User receives a Booking Confirmation with full details

Booking is saved to the database and visible in Rental History

Admin can view and manage all bookings via the Admin Panel

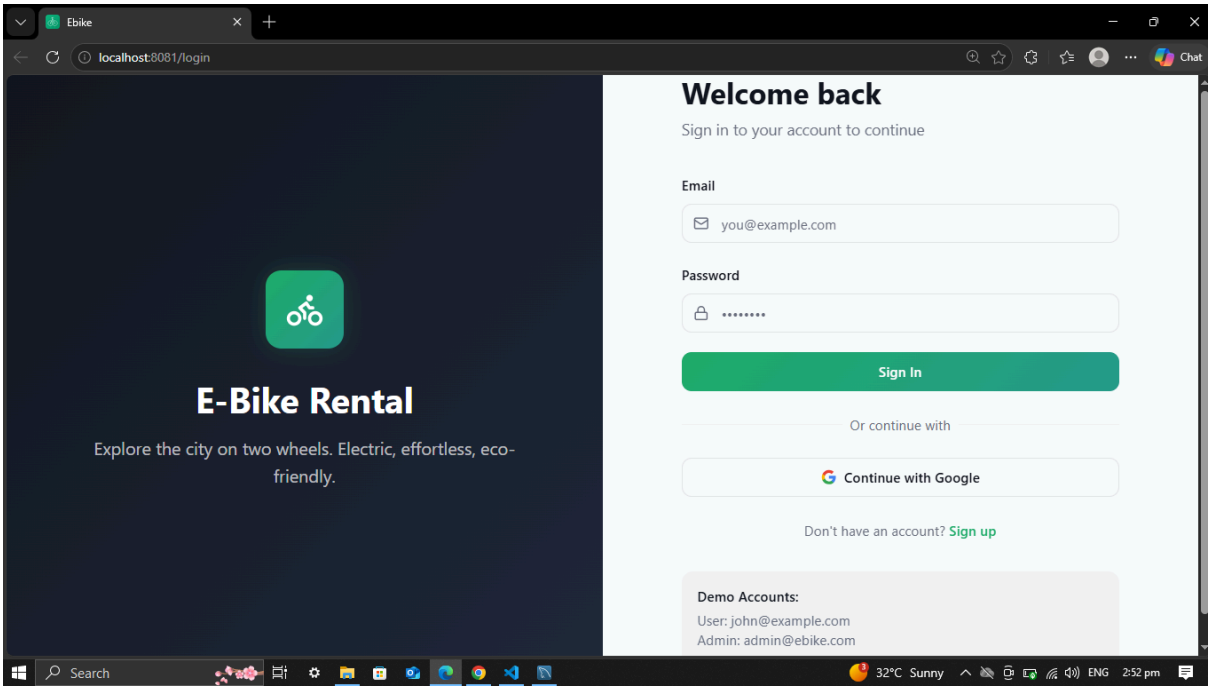
**API Endpoints Used**

| Method | Endpoint | Description |
|---|---|---|
| POST | /api/auth/register | User registration |
| POST | /api/auth/login | User login |
| POST | /api/auth/google-auth | Google OAuth authentication |
| POST | /api/auth/refresh | Refresh JWT token |
| GET | /api/bikes | Get all bikes |
| GET | /api/bikes/{id} | Get bike details |
| POST | /api/bikes | Create bike (Admin) |
| PUT | /api/bikes/{id} | Update bike (Admin) |
| DELETE | /api/bikes/{id} | Delete bike (Admin) |
| POST | /api/bookings | Create booking |
| GET | /api/bookings | Get user's bookings |
| GET | /api/bookings/{id} | Get booking details |
| PUT | /api/bookings/{id} | Update booking |

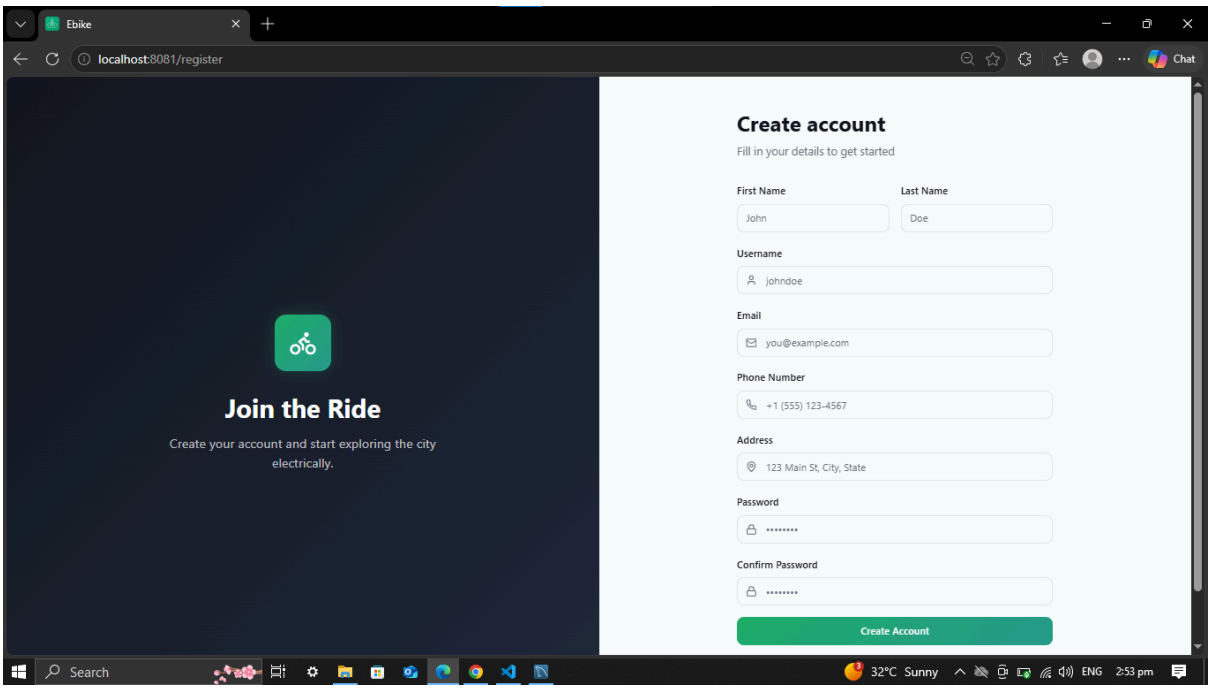
| | | |
|---|---|---|
| DELETE | /api/bookings/{id} | Cancel booking |
| GET | /api/bookings/admin/all | Get all bookings (Admin) |
| GET | /api/users/profile | Get user profile |
| PUT | /api/users/profile | Update user profile |
| GET | /api/users | Get all users (Admin) |

## SCREENSHOT

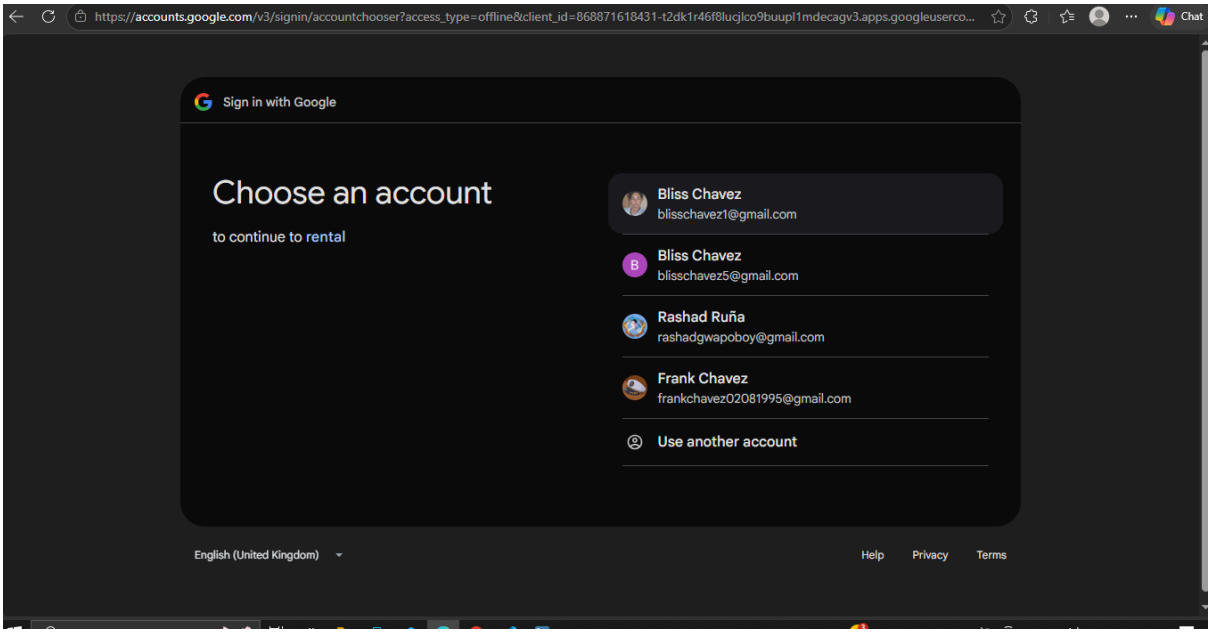
### LOGIN

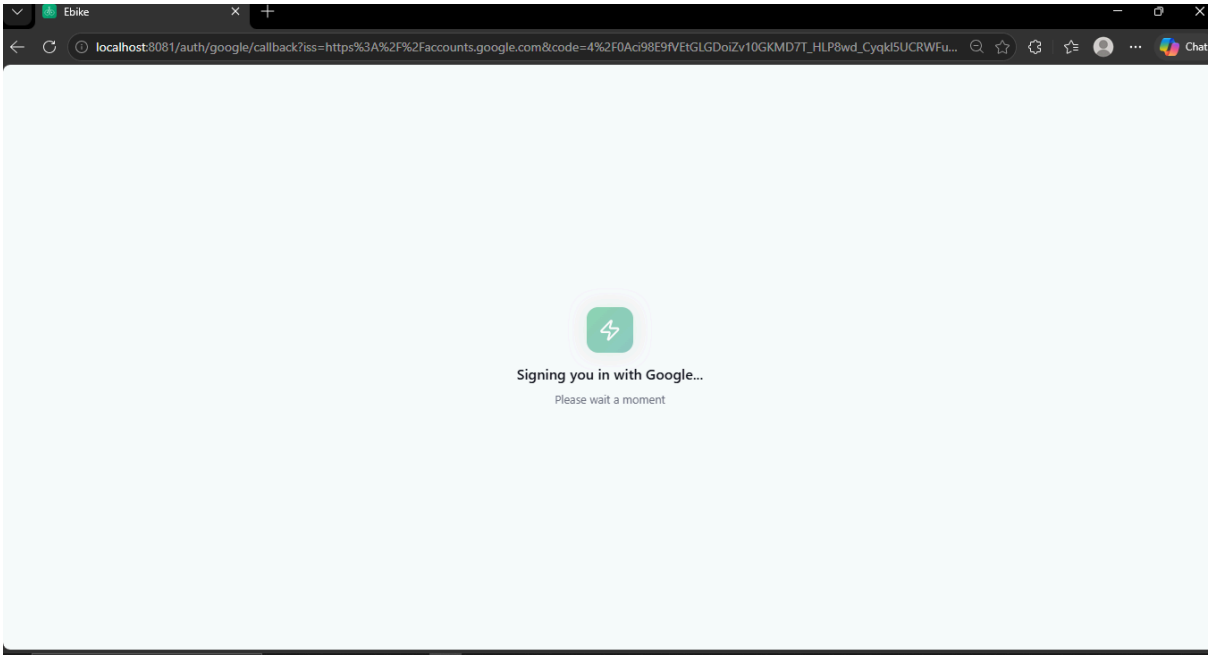


### REGISTER

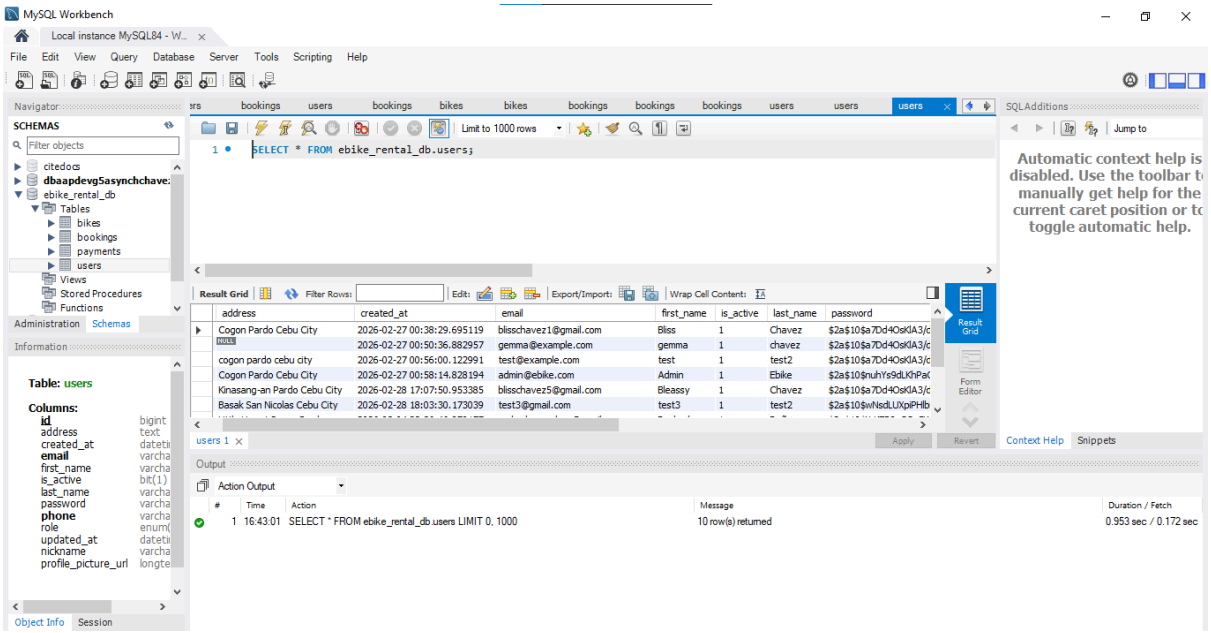


## Google log in using (blisschavez1@gmail.com)

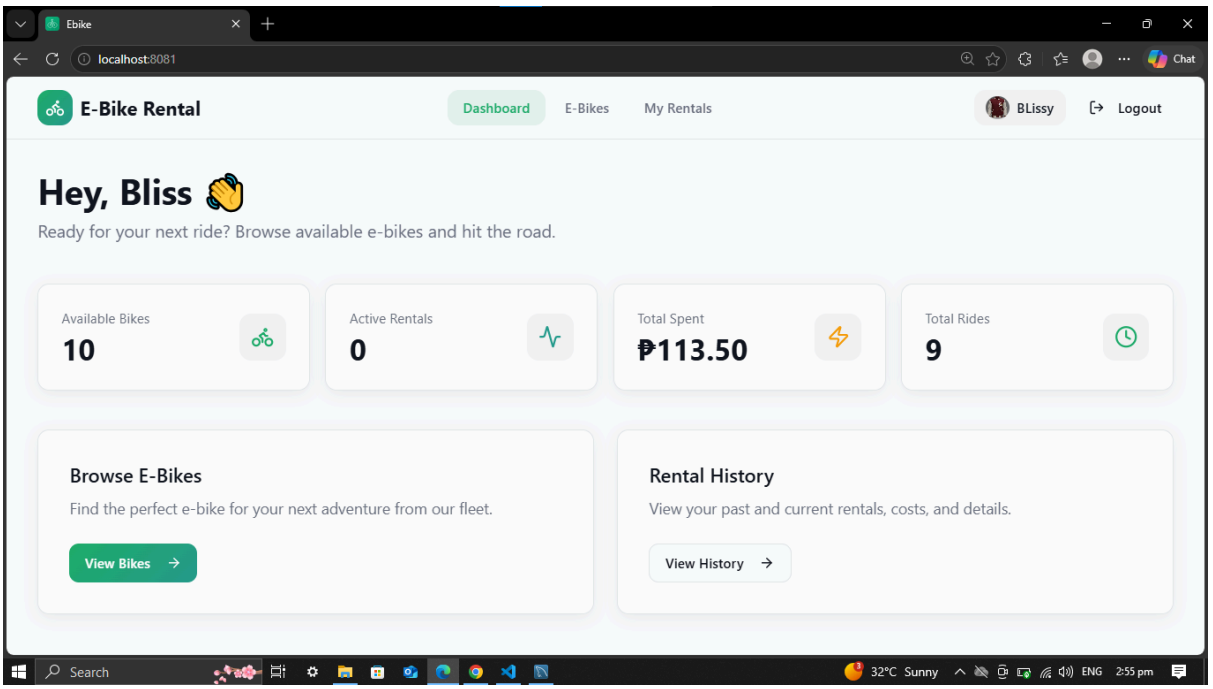




**BACKEND DATABASE RECORD -** after logging in to my gmail account and other testing gmail or registered USER



**DASHBOARD (USER)**



**PROFILE - can edit and upload profile picture excluding the email and role**
